# Miniature Optical Transceivers for Ethernet and Fibre Channel Applications in an RJ-45 package

Focus EDL announces a new series of miniature optical transceivers designed to provide designers of network equipment with a high performance, ultra small solution for Ethernet and fibre channel applications. Produced by Stratos Optical, a product line of Emerson Network Power Connectivity Solutions, the RJ series provides a complete transceiver module in an RJ-45 package.

The RJ Series consists of 850nm solutions for the fibre channel and Gigabit Ethernet markets, and a 1310nm product to cater for long-wave Gigabit Ethernet requirements. According to Stratos, the transceivers are fully compliant with IEEE Ethernet and ANSI fibre channel standards.

Operating from a single 3.3V supply, the devices are available in surface mount or through hole versions and are compatible with wave solder and aqueous washable systems.

“Stratos is well known for its innovative product design combining advances in performance with miniaturization and these transceivers in an RJ-45 format are great examples of the company’s technology leadership”. Says Geoff Philpot, Focus EDL’s Managing Director. “We see an increasing demand for smaller, lighter and more powerful transceivers for applications where overall equipment size matters and these RJ-45 packaged devices will create a lot of interest among system designers”.

### **About Focus EDL**

Established in 1989 by current Managing Director Geoff Philpot, Focus EDL is one of the UK’s leading independent distributors providing the networking,

## PRESS RELEASE

comms and professional electronics industries with the best in leading technologies from a wide variety of specialist franchised suppliers.

Key to the success of Focus EDL is its understanding of its suppliers' product offering and its ability to transfer that knowledge at the key design-in stage of a customer's project. Many of the company's franchises are exclusive to Focus EDL and all offer solutions with a very high price/performance ratio.

Based in a new, purpose-built facility in Essex, Focus EDL is qualified to ISO9001:2000
