

PRESS RELEASE

Tiny Surface-Mount Crystal Oscillators from Focus EDL

Focus EDL announces the availability of a series of ultra small surface mount crystal oscillators with dimensions of just 2.0 x 1.6 x 0.5mm.

According to Focus EDL's Managing Director Geoff Philpot, their tiny size makes the new crystal oscillators ideal for applications where component density on the board can be a prime consideration. These include WLAN Chipsets, Bluetooth, USB, GPS, and Camera Phone Modules.

Produced by Raltron, for whom Focus EDL is the UK distributor, the R2016 Series is offered with a fundamental frequency range of from 20.000 to 80.000MHz at a standard frequency tolerance of ± 50 PPM with high accuracy versions of ± 10 , 20, & 30PPM available. Operating temperature range is from -40 to $+85^{\circ}\text{C}$. Packaging for the R2016 Series is at 1000 pieces per 178mm diameter reel.
